

USE OF JELLYFISH COLLAGEN (TYPE II) IN THE
TREATMENT OF RHEUMATOID ARTHRITIS

ABSTRACT OF THE DISCLOSURE

5

Compositions of substantially homogeneous type II-like collagen from
invertebrates belonging to the class Scyphozoa, phylum Coelenterata, i.e., jellyfish,
particularly *Stomolophus meleagris*, and methods for its extraction are provided.
Methods for the treatment of arthritis, in particular rheumatoid arthritis, by administering
10 an effective amount of the collagen-containing compositions of the invention so as to
induce immune tolerance, are also provided.
